The showhyphenation package

Marking of hyphenation points

Thomas Kelkel
kelkel@emaileon.de
2023/07/08 v0.3

1 Introduction

This package shows the hyphenation points in the document.
The size of the markers adjusts to the font size and the markers are correctly placed even within ligatures. There is also an option that allows the user to have the hyphenation points typeset as explicit hyphens in the text.

2 Basic usage

To load the package, simply add the following line to the preamble of the document:

\usepackage{showhyphenation}

3 Package options

Options can be loaded by adding them comma separated within square brackets:

\usepackage[<option¹>,<option²>,...]{showhyphenation}

- **make**: By default, hyphenation points are marked by triangles below the baseline. Loading this option will typeset them as hyphens instead.
- **ontop**: By default, the triangles are placed behind the glyphs. With this option they are in front of them.
- **lime**: Changes the color of the markers from raspberry to lime.
